Safety Notice

Warning

Continued exposure to high volumes of noise in headsets can cause long-term hearing damage. Your ears will adapt to loud volume levels over time and damage your hearing even if you don't feel any discomfort. Maintain the volume at an adequate level is important while using the headset. The louder the sound is, the less time it takes to affect your hearing. It is recommended that before putting the headset on, turn the volume down completely, then slowly increase it to a moderate and comfortable level.
